AUDITORS' REPORT

To: The Shareholders' of Banque Misr (S.A.E.)

Report on the consolidated financial statements

We have audited the accompanying consolidated financial statements of **Banque Misr (S.A.E)** Which comprise the consolidated statement of financial position as at 31 December 2023 and the related consolidated statements of income, Changes in equity and cash flows for the financial year then ended, and a summary of significant accounting policies and other explanatory notes.

Managements' responsibility for the consolidated financial statements

These consolidated financial statements are the responsibility of bank's management. Management is responsible for the preparation and fair presentation of these consolidated financial statements in accordance with the rules of preparation and presentation of banks' financial statements, basis of recognition and measurement issued by Central Bank of Egypt (CBE) board of directors on 16 December 2008 which had been amended according to the instructions issued on February 26, 2019 and in light of the prevailing Egyptian laws, management responsibility includes designing, implementing and maintaining internal controls relevant to the preparation and fair presentation of consolidated financial statements that are free from material misstatement whether due to fraud or error, this responsibility also includes selecting and applying appropriate accounting policies and making accounting estimates that are reasonable in the circumstances.

Auditors' Responsibility

Our responsibility is to express an opinion on these consolidated financial statements based on our audit. We conducted our audit in accordance with the Egyptian Standards on Auditing and in the light of the prevailing Egyptian laws, those standards require that we comply with ethical requirements and plan and perform the audit to obtain reasonable assurance whether the consolidated financial statements are free from material misstatement.

An audit process involves performing procedures to obtain audit evidence about the amounts and disclosures in the consolidated financial statements, the procedures selected depend on the auditors' judgment including the assessment of the risks of material misstatement of the financial statements, whether due to fraud or error. In making those risk assessments, the auditor consider internal controls relevant to the entity's preparation and fair presentation of the financial statements in order to design audit procedures that are appropriate in the circumstances but not for the purpose of expressing an opinion on the effectiveness of the

entity's internal control. An audit also includes evaluating the appropriateness of accounting policies used and the reasonableness of accounting estimates made by management as well as evaluating the overall presentation of the financial statements.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion on the consolidated financial statements.

Opinion

In our opinion, the consolidated financial statements referred to above, present fairly in all material respects the consolidated financial position of Banque Misr (S.A.E) as of 31 December 2023 and of its consolidated financial performance and its consolidated cash flows for the year then ended in accordance with the central Bank of Egypt's rules pertaining to the preparation and presentation of the financial statements issued on 16 December 2008 which had been amended according to the instructions issued on February 26, 2019 and with the requirements of applicable Egyptian laws and regulations relating to the preparation of these consolidated financial statements.

** The financial statements of Cairo Exchange represent the financial year starting from the 16th of March, 2022 (Incorporation) to the 31th of Dec, 2023.

The following are some information regarding Banque Misr group:**• Banque Du Caire**

Banque Du Caire S.A.E. was established as a commercial bank on May 17, 1952 following national trade rule for 1883 that was cancelled except its first section of the second unit by issuing trade law rule number 17 for the year 1999, on May 17, 1999.

The head office is located at No. 6 Dr. Moustafa Abo Zahra Street, Nasr City, Cairo, Egypt.

The bank offers banking services that are related to its activities in Arab Republic of Egypt through 249 branches and units and it employs 8871 employees.

In May, 2007, Banque Misr acquired all shares of BDC and transferred its ownership in the stock market.

On the 28th of April, 2022, Banque Misr purchased the portion of shares of Banque Du Caire owned by Misr Capital which amounts to a sum of 1,124,999,956 shares adjusting the direct ownership to become 99.99% instead of 57.14%.

On the 6th of November, 2022, the authorized capital was determined to be EGP 20bn, the issued capital to be EGP 10bn divided on 5 billion stocks with a par value of EGP 2 per stock.

Paid-in under capital increase:

- On 21/06/2023, the extraordinary general assembly held and agreed to the following:
 - Adjusting the context of Article No.6 of the bank's Statutes which is related to authorized and issued capital and the capital structure of the bank's shareholders.
 - Increasing the bank's issued and paid-in capital to reach EGP 19bn after the increase, the legal procedures and noting in the commercial register are to be completed.
- On 24/10/2023, the Board of Directors of the Central Bank of Egypt approved Banque Misr's request to increase its shareholding percentage in Banque du Caire through a cash increase of 1.5 billion Egyptian pounds, bringing the bank's issued and paid up capital after the increase to 20.5 billion Egyptian pounds, and legal procedures are being completed.

- **Nile Scan and Labs**

Nile Scan and Labs S.A.E. was established on the 9th of April, 1996 in accordance with the law of incentives and investment guarantees No.8 of 1997 and based on the decision of the General Authority for Investment & Free Zones No.559 of 1995 that was promulgated on 29 July, 1995 complying with the regulations of Investment Law which was issued in law No. 230 of 1989 and also law No.95 of 1992 with the purpose of establishing a center for medical imaging. The company manages its operations from the headquarter located at No.10, Al Nahda St., Maadi, Cairo.

On 28 of July, 2010, the extraordinary general assembly agreed on adding the activity of conducting medical analyses.

In May, 2023, Misr Capital has acquired 66.79% of the company's shares.

2- Basis of preparation of consolidated financial statements and Summary of significant accounting policies

These Consolidated financial statements have been prepared in accordance with the Central Bank of Egypt regulations approved by CBE board of directors on December 16, 2008 in accordance with the instructions issued by CBE on February 26, 2019. As well as the Egyptian Financial Accounting standards. The financial statements are presented rounded to the nearest million pounds, and the subsidiaries are fully aggregated and the sister companies are grouped as an equity manner.

2.1 Basis of consolidation

A- Subsidiaries

- Are the companies that the bank directly or indirectly have the right to control their financial and operational policies, In which the bank usually owns more than half of the voting rights., Taking into consideration the impact of future voting rights that could be practiced or transferred in the meantime while assessing whether the bank is having control over the firm or not, All subsidiaries are being consolidated since the date on which the ownership transferred to the group, Also it's eliminated from the consolidation on the date on which the control is over.
- The purchase method is being used while acquiring subsidiaries, On date of acquiring, the acquiring cost is being assessed through the fair value, or The amount of assets paid for the purchase , or the amount of owners' equity instruments issued , or the liabilities paid or accepted by acquiring the firm, adding any direct costs that incurred as a result of acquiring the subsidiary, Net assets are being measured ,also possible liabilities that are measurable at fair value on date acquisition, disregarding any minority rights , Any additional costs that exceeds the fair value of the bank's portion will be considered a "goodwill", If the acquisition cost is less than the fair value, the difference would be recorded in the income statement as other operating income (expense).
- Intercompany transactions and balances and unearned revenues derived from intercompany transactions and possible losses should be eliminated, and the financial policies for subsidiaries should be changed to comply with parents' policies whenever it's needed to ensure applying a unified policy for the group, in case of the group's subsidiaries applying Egyptian Accounting Standard No. 49 Lease Contracts, a right-of-use item appears in the consolidated financial statements.
- The Full consolidated principle is being followed for bank purposes.

Consolidation principles includes the following:

- Eliminating all balances and transactions between group companies and any unearned revenues derived from it.
- Non-controlling interest represent no controlling shareholders in subsidiaries.

Transactions with Non-controlling interest (NCI):

- The group considers transactions with NCI as it's a transaction with external parties, and recognizes all profits and losses that results from selling to NCI in group's income statement, A goodwill arises from purchases from NCI that represents the difference between the amount paid to acquire the share and the book value of subsidiaries assets.

For a subsidiary company, if the NCI portion of losses exceeds their ownership rights, this excess will be added to the parents' rights except the losses that the NCI are obliged to bear with a condition of being able to make additional investments to cover the impact of losses, and if the subsidiary achieved profits in the future these profits will be added to the parents' rights to the extent that covers the previously bearded losses that arose from NCI losses.

B- Reporting associate companies

- Associate company is the company that's directly or indirectly owned by one of the group's companies and have the right to make an impact on the company but not to the extent of the control, and usually the group has a percentage of ownership in the company from 20% to 50 % of voting rights, Investment in associates is being reported at cost and later would be recognized by equity method.

The group's portion of profits and losses that arises after acquisition is being recognized in associate Profit and losses statements.

IF the group's losses from a subsidiary equal or exceeds its portion including any unsecured debt balances, the group wouldn't recognize any losses unless it's committed to do so, or made payments on behalf of the subsidiary.

Intercompany transactions of unearned revenues derived from intercompany transactions and possible losses should be eliminated according to the portion in associate, and the financial policies for subsidiaries should be changed to comply with parents' policies whenever it's needed to ensure applying a unified policy for the group

Profits and losses that arise from changes in associate's ownership structure is being recognized in Profit and loss statement.

C- Control

Control means group's ability to control the financial and operational policy of the companies in which they invest in order to make profit.

The group is considered controlling the investment if they have 50 % of voting rights in subsidiary and It could be less in some cases as follows:

1. If there's a side agreement gives the holding company the right to direct more than 50 % of voting rights in the investment company
2. If there's a power to the group, arising from an agreement or legislation to control the company's financial and operational policy.
3. Being able to hire or fire majority of Board of directors
4. Controlling more than half of BOD votes.

D- Non-controlling interest

The portion of shareholders outside the group that's not directly or indirectly owned in it's net profits or net assets of its subsidiary.

E- Regional reports

A region of the activity represents a group of assets and transactions related to providing products or services that's characterized with risk and different benefits than the others that's related to other activities, and geographical region is related to providing services or products within the same region having the same risks and benefits that differentiate from other geographical regions.

F- Transactions with Non-controlling interest:

Non-controlling interest appears in a separate section on the consolidated financial statements, and the group considers transactions with NCI as it's a transaction with outsiders, and its revenues and losses that arise from sale of owner's equity is being recognized in income statement, and purchasing from NCI causes good will that represents the difference between the amount paid to acquire shares and the book value of company's net assets.

H- Foreign currency translation**H/1 Functional and presentation currency**

The separate financial statements for each subsidiary of the bank are measured using the currency of basic economic environment in which the subsidiary conducts its activity "The functional currency".

These consolidated financial statements are presented in Egyptian pound, which is also the functional currency of Bank Misr (Parent Company).

H/2 Transactions and balances in foreign currencies

Each subsidiary holds its accounting records in its functional currency and transactions in other currencies are recorded during the financial year using the prevailing exchange rate of the transaction date. Monetary assets and liabilities denominated in foreign currencies are re-evaluated at the end of each financial year on the basis of the prevailing exchange rates. The profits and losses resulting from the settlement of those transactions and differences resulting from re-evaluation are recognized in the income statement under the following items:

- Net Trading Income of financial asset. (held-for-trading financial assets or classified at fair value through profit or loss).
- Other operating income (expenses) for the remaining items.
- Changes in fair value of monetary financial instruments in foreign currency; which are classified as other comprehensive income (debt instruments) are analyzed into valuation differences resulting from changes in amortized cost of the instrument, differences resulting from changes in the prevailing exchange rates and differences resulting from changes in the fair value of the instrument. Valuation differences resulting from changes in the amortized cost are recognized and reported in income statement in interest income, differences resulting from changes in foreign exchange rates are recognized and reported in 'other operating income' (expenses). Whereas differences from changes in fair value are recognized in equity in the 'fair value reserve / Financial investments at fair value through other comprehensive income'. Valuation differences resulting from changes in exchange rates of non-monetary items in foreign currencies (equity instruments) are recognized in the profit and loss resulting from the change in the fair value of financial assets at fair value through profit or loss. While valuation differences resulting from changes of the rates of equity instruments classified as Financial investments at Fair value through other comprehensive income are recognized in equity in 'fair value reserve'.

H/3 Foreign Subsidiaries

The Income statement items and balance sheet of foreign subsidiaries whose functional currency differ from presentation currency of consolidated financial statement, are translated into Egyptian Pounds as follows:

- Assets and liabilities of foreign branches are translated using the closing rate at the financial position date.
- Revenues and expenses in the income statement are translated using average exchange rates unless the average does not represent an acceptable approximation of the cumulative effect for the prevailing exchange rates on that date then revenue and expense are translated using exchange rates on the dates of transactions.
- Resulted valuation differences are recognized as (foreign currency translation differences reserve) included in other comprehensive income in the equity.
- Owner's Equity accounts are translated according to historical exchange rates at the date of transaction.

I- financial assets

I/1 Initial recognition and measurement

The group initially recognizes financial assets and liabilities on the date that the Group becomes a party to the contractual terms of the financial instrument.

I/2 Classification

Financial assets- policy applicable from July 1, 2019

- On initial recognition, the bank classifies financial assets into financial assets at amortized cost, financial assets at fair value through other comprehensive income or at fair value through profit and loss.
- The financial asset is measured at amortized cost if both of the following conditions are met and it has not been allocated by the bank's management upon initial recognition of the fair value through profit and loss:
 - Financial asset is retained in a business model that is intended to hold the asset in order to collect contractual cash flows.
 - The contractual terms of the financial asset result in cash flows on specific date which are only payments of original amount and interest of the financial instrument.
- Debt instrument is measured at fair value through other comprehensive income only when both of the following conditions are met and has not been classified at fair value through profit or loss:
 - The financial asset is retained in a business model which is intended to collect contractual cash flows and the sale of financial asset or;
 - The contractual terms of the financial asset result in cash flows on specific dates result in cash flows that are only payments of original amount and interest of the financial instrument.
- Upon initial recognition of an equity instrument which is not held for trading, the bank may elect once irrevocably to present changes in fair value / through other comprehensive income and This choice is made on an investment by investment basis.

- All other financial assets are classified at fair value through profit and loss.
In addition, upon initial recognition, the bank can allocate irrevocably - a financial asset as measured at fair value through profit and loss, although it meets the terms of the classification as a financial asset at amortized cost or at fair value through other comprehensive income, if doing so would prevent or reduce - essentially - inconsistencies in accounting measurement.

Business model evaluation

- Debt and equity instruments are classified and measured as follows:

Financial instrument	Methods of measurement according to Business Models		
	Amortized cost	Fair value	
		Through / OCI	Through profit and loss
Equity instruments		An irrevocable election at initial recognition.	Normal treatment of equity instruments
Debt instruments	Business model of assets held for collecting contractual cash flows	Business model of assets held to collecting contractual cash flows and sell.	The business model of assets held for trading.

- The bank prepares, documents and approves Business Models in accordance with the requirements of IFRS 9 reflecting the bank's strategy for managing financial assets and its cash flows as follows:

Financial asset	Business model	Basic characteristics
Financial assets at amortized cost	Business model of financial assets held to collect contractual cash flows	- The objective of the business model is to retain the financial asset to collect the contractual cash flows of the principal amount of investment and interest. - Sale is an incidental event for the purpose of this model and under the terms of the standard which are represented in deterioration in the creditworthiness of the issuer of the financial instrument, or the sale will not result in significant changes in the future cash flows of the financial asset, or selling to manage credit concentration risks. - Lowest sales in terms of periodicity and value. - The bank makes clear and reliable documentation of the reasons for each sale and its compliance with the requirements of the Standard.
Financial assets at fair value through other comprehensive income	Business model of financial assets held to collect contractual cash flows and sale	- Both the collection of contractual cash flows and sales are complementary to the objective of the model. - High sales relatively (in terms of periodicity and value) compared to the business model of financial asset retained for the collection of contractual cash flows.
Financial assets at fair value through profit and loss	Other business models including (trading - management of financial assets at fair value - maximizing cash flows by selling)	- The objective of the business model is not to retain the financial asset to collect the contractual cash flows or retained for the collection of contractual cash flows and sales. - Collecting contractual cash flows is an incidental event for this purpose of model. - Management of financial assets by management at fair value through profit and loss to avoid inconsistency in accounting measurement (complex financial instruments). - Conditions for classifying financial assets at fair value through profit and loss: - - the financial assets must meet all of the following

		conditions which the bank acquires at fair value through profit and loss: - • To be registered on the financial market exchange, domestic or foreign. • Must have an active deal during the three months preceding the date of acquisition.
--	--	---

The bank assesses the objective of the business model at the portfolio level where the financial asset is retained considering that it reflects the business is managed and how the management is provided with information. The information to be taken into consideration when evaluating the objective of the business model is as follows:

- The documented policies and objectives of the portfolio and the implementation of these policies in practice. In specially, whether the management strategy focuses only on the collection of the contractual cash flows of the asset and maintaining a specific interest rate of return to meet the maturities of the financial assets with those of the liabilities that finance these assets or the generation of cash flows through the sale of these assets.
- How to evaluate and report the portfolio performance to senior management.
- Risks affecting the performance of the business model, including the nature of the financial assets held within that model and the manner of managing these risks.
- How to assess the of business managers' performance (fair value, return on portfolio, or both)
- The periodicity, value and timing of sales processes or transaction in prior periods, the reasons for such transactions, and expectations regarding future selling activities. However, information on sales activities is not taken into consideration separately, but as part of a overall assessment of how the bank its objective of managing financial assets and generates cash flows is achieve.
- Financial assets held for trading or managed and its performance is evaluated at fair value are measured at fair value through profit and loss as they are not held to collect contractual cash flows or to collect contractual cash flows and sell financial assets together.
- **Assess whether the contractual cash flows of an asset are payments presenting limited only to the principal of the instrument and interest.**

For the purpose of this valuation, the bank recognizes the original amount of the financial instrument at fair value of the financial asset at the initial recognition.

The interest is defined as the time value of money and the credit risk associated with the original amount over a specified period of time and other basic lending risk and costs (such as liquidity risk and administrative costs) as well as profit margin.

To assess whether the contractual cash flows of an asset represents payments that are limited only to the principal of the financial instrument and interest, the bank takes into consideration the contractual terms of the instrument.

This assessment includes whether the financial asset contains contractual terms that may change the timing or amount of contractual cash flows, thereby not meeting that requirement. for conducting such assessment, the bank shall consider the following:

- expected events that may change the amount and timing of cash flows.
- Leverage characteristics (interest rate, maturities, currency ...).
- conditions of accelerated payment and term extension.
- Conditions that may limit the ability of the bank to claim cash flows from certain assets.
- Features that may adjust the time value of money (re-setting the interest rate periodically).

Financial liabilities- policy applicable from July 1,2019

- On initial recognition, the bank classifies financial liabilities into financial liabilities at amortized cost, and financial liabilities at fair value through profit or loss based on the objective of the bank's business model.
- All financial liabilities are recognized initially at fair value on the date at which the bank becomes a party to the contractual terms of the financial instrument.
- Financial liabilities classified at amortized cost are subsequently measured at amortized cost and by using the effective rate method.
- Financial liabilities classified at fair value through profit or loss are subsequently measured at fair value. the change in the fair value which is related to the change in the degree of credit classification of the bank is recognized through other comprehensive income, while the remaining amount of the change in fair value is presented in the income statement.

Reclassification

- Financial assets are not reclassified after initial recognition, unless the bank changes the business model of managing these financial assets.
- In all cases, there are no reclassifications between the items of financial liabilities at fair value through profit and loss and financial liabilities at amortized cost

I/3 Derecognition:**-Financial assets**

- The bank derecognizes the financial assets when the contractual right of collecting the cash flows from the financial asset ends or the bank transfers the right of receiving of the transaction contractual cash flows in accordance with the transactions in which all significant risks and benefits of ownership relating to the transferred financial asset are transferred or when the bank has not transferred to a third party substantially.
- When a financial asset is derecognized, the difference between the book value of the asset (or the book value assigned to the part of the asset that is derecognized) and the sum of both proceeds received (including any new asset acquired deducting from it any new liability incurred) or any consolidated gains or losses previously recognized at the fair value reserve for financial investments at fair value through other comprehensive income and that for debt instruments.
- As of July 1, 2019, any accumulated profits or losses that have been recognized in the statement of other comprehensive income related to investment in equity instruments that have been allocated as investments at fair value through other comprehensive income, are not recognized in the profit and loss when this asset is derecognized. Any share that has arisen or has been retained from the asset intended to be derecognized (fulfills the de recognition conditions) shall be recognized as a separate asset or liability.
- When the bank enters into transactions whereby the bank transfers assets previously recognized in the statement of financial position, but it retains all or substantially most of the risks and benefits associated with the transferred asset or part of it. In these cases, the transferred asset is derecognized.
- Regarding to transactions in which the bank does not maintain or transfer substantially all the risks and benefits associated with ownership of the asset and maintains control over the asset, the bank continues to recognize the asset within the limits of its continuing association with the financial asset, and the bank's ongoing association with the financial asset is determined by the extent to which the bank is exposed to changes in the value of the transferred asset.

- In some transactions, the bank maintains an obligation to service the transferred asset in exchange for a commission, at this time the transferred asset is derecognized if it meets the derecognition conditions. The service contract is recognized as an asset or a liability if the service commission is greater than the appropriate amount (asset) or less than the appropriate amount (liability) to perform the service.

Financial liabilities

- The group adjusts a financial liability when its terms are adjusted and the cash flows of the adjusted liability is substantially different. In this case,

I/4 Amendments to financial assets and liabilities

Financial assets

- If the terms of a financial asset are adjusted, the bank assesses whether the cash flows of the adjusted asset are significantly different. If the cash flows are significantly different, then the contractual rights of cash flows from the original financial asset are considered expired, and then the original financial asset is derecognized and a new financial asset is recognized at fair value and the value resulting from adjusting the total book value is recognized as profit or loss in (income statement). However, if this adjustment occurred due to the financial difficulties of the borrower, then the profits are deferred and presented with the accumulated impairment losses while the losses are recognized in the statement of profits and losses.
- If the cash flows of the adjusted asset recognized at amortized cost are not significantly different, then the adjustment does not result de recognition of the financial asset.

Financial Liabilities

- The bank adjusts a financial liability when its terms are adjusted and the cash flows of the adjusted liability are substantially different. In this case, a new financial liability is recognized based on the terms adjusted at fair value. The difference between the carrying amount of the old financial liability and the new financial liability is recognized with the adjusted terms in (income statement).

J- Clearing financial instruments

- Set-off between assets and financial liabilities is made if there is an enforceable legal right to make a set-off between the recognized amounts and an intention to make settlement on the basis of net amounts, or to receive the asset and settle the obligation simultaneously.

Repos are reported in the balance sheet as per the net amount of treasury bills.

K- Revenue recognition:

K/1 Interest income and expense

Interest income and expense for all financial instruments except for those classified as held-for-trading or those classified at fair value through profit and loss are recognized in 'Interest and similar income' or 'Interest and similar expense' in income statement using the effective interest method. The effective interest method is a method of calculating the amortized cost of a financial asset or liability and allocating the interest income or interest expense over the relevant period of this financial instrument. The effective interest rate is the rate that discount estimated future cash flows that expected to be paid or received over the expected life of the financial instrument (or, a shorter period if appropriate) to reach the carrying amount of the financial asset or liability. When calculating the effective interest rate, the bank estimates cash flows considering all contractual terms of the financial instrument (i.e. Early repayment options) but does not consider future credit loss. The calculation includes all fees paid or received between parties of the contract, that are considered part of the effective interest rate, also transaction costs, include all other premiums or discounts.

When loans or debts are classified as non-performing or impaired (stage 3), related interest income are not recognized in income statement and they are recorded in marginal records outside the financial statements and they are recognized in income according to cash basis as per the following:

- When collected and after recovery of all arrears for consuming loans, mortgage loans for personal housing and small loans for economics activities.
- concerning loans granted to corporate, interest income is recognized on cash basis too, as the subsequent calculated interest according to rescheduling contract is added to a credit balance in the balance sheet till 25% of the due balances of the financial asset are paid after paying the accrued unearned / marginalized returns and after the installments continued to be regular for at least 12 months and after that calculated interest will be recognized as revenue (interest on the performing rescheduling agreement balance) without marginal interest before the rescheduling agreement which will be not recognized in interest income until the full settlement of the outstanding loan balance before rescheduling in Balance sheet.

K/2 Fee and commission income

- Fees due from loan or facility service are recognized as revenue when the service is provided. Fees and commissions on non-performing or impaired loans or debts are cased to be recognized as income, and are rather recorded in marginal records outside the financial statements; these are recognized as revenue, on a cash basis, only when interest income on those loans is recognized, for fees and commissions that represent an integral part of the effective interest rate of a financial asset are treated as an adjustment to the effective interest rate of that financial asset.
- Fees on the debt instruments that are measured at fair value are recognized in revenues on initial recognition and syndicated loan fees received by the bank are recognized when the syndication has been completed and the bank does not hold any portion of it, or holds a part at the same effective interest rate used for the other participant's portions.
- Fees and Commissions resulting from negotiating, or participating in the negotiation of a transaction for a third party – such as the arrangement of the acquisition of shares or other financial instruments or the purchase or sale of institution – are recognized on completion of the underlying transaction in the income statement, Administrative and other services fees are recognized as income on a time proportionate basis over the lifetime of the service, Fees charged for custodian services provided over long periods are recognized as income over the period during which the service is rendered.

K/3 Dividend Income

Dividends are recognized in income statement when the right to collect it is declared other than subsidiaries and sister companies.

L-Repo and Reverse repo agreements

Securities sold under repurchase agreements (repos) are presented in the financial statements and deducted from treasury bills balance. Securities borrowed or (reverse repos) are reclassified in the financial statements and added to treasury bills balance. The difference between purchase and resale price is treated as interest and accrued over the life of the agreements using the effective interest method.

M-Loans and advances to banks& customers

Represents non-derivative financial assets of a fixed amount or identifiable and not traded in an active market.

N-Financial investments at fair value through profit and loss

Equity instruments, debt instruments and securities are measured at fair value, and changes in fair value are recognized in the statement of profit and loss.

O-Financial investments at fair value through other comprehensive income

Equity instruments, debt instruments and securities are measured at fair value, and changes in fair value are recognized in the statement of comprehensive income.

P-Financial investments at amortized cost

It is recorded under this item at amortized cost and it is not subject to the requirements of fair value measurement, but subject to the requirements for measuring expected credit losses.

Q-Impairment of financial assets**Policy implemented as of July 1, 2019**

Impairment losses are recognized for the expected credit losses of the following financial instruments, which are not measured at fair value through profit and loss, namely:

- Financial assets that are debt instruments.
- Accrued debts.
- Financial guarantee contracts.
- Loan commitments and similar debt instruments.

Impairment losses on investments in equity instruments are not recognized.

Measuring expected credit losses

- The bank evaluates the debt instrument portfolios on a monthly basis at the portfolio level to all financial assets for individuals, small, medium, micro enterprises and on a periodic basis in relation to the financial assets of institutions classified under the follow-up list in order to monitor the credit risk related to them, as this evaluation is done at the counterparty level on a periodic basis, the criteria used to determine the significant increase in credit risk are reviewed and monitored periodically by the Credit Risk Department.
 - At the date of the financial statements, the Bank estimates the provision for impairment losses for the financial instrument at an amount equal to the expected credit losses over the life of the financial instrument, except for the following cases in which the provision for the impairment losses is estimated at an amount equal to the expected credit losses over a period of twelve months:
 - 1) A debt instrument that has been identified as having a low credit risk at the date of the financial statements (debt instruments for Stage one).
 - 2) Other financial instruments that the credit risks at the reporting date has not increased significantly since the initial recognition (debt instruments for the Stage one).
 - The Bank considers the expected credit losses to be a probabilistic estimate of the expected credit losses, which are measured as follows:
- The expected credit losses of financial assets are measured in the stage one on the basis of the present value of the total monetary deficit calculated on the basis of adjusted historical failure probabilities rates with forecasts of average scenarios for macroeconomic indicators for the next twelve months multiplied by the value at failure, taking into consideration the weighting of expected recovery rates when calculating the loss rate for each group of debt instruments with similar credit risk. Given that the expected credit losses consider the amount and timing of the payments, the credit losses arise even if the facility expects to be paid-in full but at a later time after the debt becomes payable under the contractual terms. The expected credit losses over a period of twelve months are part of the expected credit losses over the life of the asset that result from defaulting events in the payment of a financial instrument and potential within twelve months after the date of the financial statements.
- The expected credit losses for the financial assets in the second stage are measured on the basis of the present value of the total cash deficit calculated on the basis historical probability of default rates modified by the expectations of the average scenarios of macroeconomic indicators for the life of the financial asset multiplied by the value upon failure, taking into account the weighting of the expected recovery rates when calculating the loss rate for each group of debt instruments with similar credit risk.
- Financial assets that are credit-impaired at the date of the financial statements are measured as the difference between the total carrying amount of the asset and the present value of expected future cash flows.

When calculating the loss rates, the bank considers the expected recovery rates from the present value of the expected cash flows, whether from cash and non-cash guarantees or expected future or historical repayment rates, as follows:

- For debt instruments classified within the stage one, only the value of the cash collateral and cash equivalents represented in cash and other financial instruments that can be converted into cash easily in a short period of time (3 months or less) and without a change (loss) in their value as a result of credit risk.
- For debt instruments classified under both stage two and three, only the types of guarantees are considered in accordance with the rules issued by the Central Bank of Egypt on 24/5/2005 regarding determining the creditworthiness of clients and creating provisions, while the value of those guarantees is calculated according to what is mentioned in the rules for presentation and preparation of financial

statement for banks and the standards of recognition and measurement issued by the Central Bank of Egypt on December 16, 2008.

- For debt instruments held by banks that operate outside Egypt, the probability default rates are determined on the basis of the credit rating of the head office of the bank operating outside Egypt and not exceeding credit rating of the head office country and considering the instructions issued by the central bank regarding country risks, and the rate is calculated the loss is at least 45%.
- For debt instruments held by banks operating inside Egypt, the probability loss given default is calculated on the basis of the bank's classification by foreign international rating agencies and Egyptian bank branches abroad are treated as the head office, and branches of foreign banks that operate inside Egypt are treated as their head office, the loss given default is calculated at the rate of at least 45%.
- The provision of expected credit loss for financial assets recognized in the financial position is deducted from the value of the financial assets when presenting the statement of financial position, while the provision of expected credit loss relating to loan commitments, financial guarantee contracts and contingent liabilities is recognized under the other provision for financial position liabilities.
- For financial guarantees contracts, the bank estimates the expected credit loss based on the difference between the payments expected to be paid to the guarantee holder, deducted any other amounts that the bank expects to recover.

R-Derivative financial instruments and hedge accounting

- Derivatives are recognized initially and subsequently at fair value. Fair values of exchange-traded derivatives are obtained from quoted market price. Fair value of over – the – counter derivatives are obtained using valuation techniques including discounted cash flow models and option pricing models. Derivatives are classified as assets when their fair value is positive and as liabilities when their fair value is negative.

Embedded derivatives in other financial instruments, such as conversion option in a convertible bond which can be converted to shares, are treated as separate derivatives when their economic characteristics and risks are not closely related to those of the host contract provided that the host contract is not classified as at fair value through profit and loss. These embedded derivatives are measured at fair value with changes in fair value recognized in income statement (net trading income) and they cannot be separated if the bank decides to designate the hybrid contract at fair value through profit and loss. The timing method of recognition through / income statement of any gain or loss arising from changes in the fair value of derivatives depends on whether the derivative is designated as a hedging instrument and the nature of the item being hedged. The bank designates certain derivatives as:

- Hedging instruments of the risks associated with fair value changes of recognized assets or liabilities or firm commitments (fair value hedge).
- Hedging of risks relating to future cash flows attributable to a recognized assets or liability or a highly probable forecast transaction (cash flow hedge).
- Hedging of net investment in foreign transactions (net investment hedge)

Hedge accounting is used for derivatives designated in a hedging relationship when the following criteria are met.

At the inception of the hedging relationship, the bank documents the relationship between the hedging instrument and the hedged item along with its risk management objectives and its strategy for undertaking various hedge transactions. Furthermore, at the inception of the hedge and on ongoing basis, the bank documents whether the hedging instrument is expected to be highly effective in offsetting changes in fair values or cash flows of the hedged item attributable to the hedged risk.

S-Intangible assets

A. Goodwill

Goodwill represents the increase in the cost of acquisition over the fair value of the group's share of net assets and the Goodwill is amortized by 20% annually.

B. Other Intangible assets

- Intangible assets represent the cost of acquiring computer programs and the licensees of using it. Intangible assets appear with historical cost after deducting accumulated amortization and provision of impairment losses.
- Other intangible assets: Intangible assets other than goodwill and computer software like trademarks, licenses, and the benefits of leases. Other intangible assets are represented at the cost of acquisition and amortized in by straight-line method or on the basis of the expected economic benefits, over their estimated production lifetime, and for assets that do not have a specific production lifetime and are not subject to be amortize, but tested for impairment annually and the value of the impairment (if any) will be carried on the income statement.

T-Non-monetary assets acquired as settlement of debts

Assets acquired by the bank to settle debts are recorded within "Other Assets" with the same value acquired by the bank and in case of there is any decreases in fair value of these assets are charged to the income statement, if there is a subsequent increase in fair value, it will be credited to the income statement up to the amount previously charged. For the Real Estate which granted a new deadline for disposal has been formed a banking risk reserve in equity.

U-Property, plant and equipment

All property, plant and equipment are recorded at historical cost less depreciation and impairment losses. Depreciation of Fixed assets is calculated using the straight-line method with reliable rates for each subsidiary to allocate their residual values over estimated useful lives, as follows:

V- Leasing

All lease contracts to which Banque Misr is a party are treated as operating leases.

V/1 Banque Misr as a lessee

Lease payments under operating leases less any discounts received from the lessor, are recognized as expenses in the income statement on a straight-line basis over the period of the contract.

V/2 Banque Misr as a lessor

Assets leased out under operating lease contracts are reported as part of the fixed assets in the separate balance sheet and are depreciated over the expected useful lives of the assets, on the same basis as other property assets.

Lease rental income is recognized in profit or loss, net of any discounts granted to the lessee, using the straight-line method over the contract term.

X-Contingent liabilities and commitments

Contingent liabilities in which the group involved as a party in addition to any commitments of fixed assets, financial investments, and others recorded as off-balance sheet items as “contingent liability and commitments “. Such transaction does not represent actual assets or liabilities at the financial statements date.

Y-Cash and cash equivalents

For purposes of presenting cash flow statement, cash and cash equivalents including (cash, obligatory reserve balances with CBE, due from banks as well as treasury bills) maturing within 3 months from the acquisition date.

Z-Other provisions

Other provisions are recognized when the bank has present legal or constructive obligations as a result of past events; where it is more likely than not that a transfer of economic benefit will be necessary to settle the obligation, and it can be reliably estimated.

In case of similar obligations, the related cash outflow should be determined in order to settle these obligations as a group.

When a provision is wholly or partially no longer required, it is reversed through profit or loss under other operating income (expenses).

Provisions are measured at the present value of the expected required expenditures to settle obligations after one year from financial statement date using the appropriate rate in accordance with the terms of settlement, which reflects the time value of money. If the settlement term is less than one year, the estimated value of obligations is calculated.

Income tax

Income tax on the profit or loss for the period and deferred tax are recognized in the income statement except for income tax relating to unearned gain which was recognized directly in equity.

Income tax is recognized based on net taxable profit using the tax rates applicable on the date of the financial statement in addition to tax adjustments for previous years.

Deferred taxes arising from temporary time differences between the book value of assets and liabilities are recognized in accordance with the principles of accounting and value according to the principle of the tax. This is to determine the value of deferred tax on the expected manner to realize or settle the values of assets and liabilities using tax rates applicable on the date of the financial statement.

Deferred tax assets of the bank recognized when there is a probable possibility of achieving taxable profits in the future through which asset can be used, the value of the deferred tax assets is reduced by the value of the part from which the expected tax benefit will not be realized during the following years. in the case of a higher benefit expected tax, deferred tax assets will increase within the limits of the previously reduced.

3- Financial risk management

The Bank's activities expose it to a variety of financial risks and those activities involve the analysis, evaluation, acceptance and management of some degree of risk or combination of risks. Taking risk is core to the financial business, and the operational risks are an inevitable consequence of being in business. The Bank's aim is to achieve an appropriate balance between risk and return and minimize potential adverse effects on the Bank's financial performance, and the most important types of financial risks are credit risk, market risk, liquidity risk and other operating risks, also market risk includes exchange rate risk, rate of loss given default risk and other prices risks.

The Bank's risk management policies are designed to identify and analyze these risks, to set appropriate risk limits and controls, and to monitor the risks and adherence to limits by means of reliable and up-to-date information systems. The Bank regularly reviews its risk management policies and systems to reflect changes in markets, products and emerging best practice.

Risk management is carried out by a risk department under policies approved by the Board of Directors. Risk department identifies, evaluates and hedges financial risks in close co-operation with the Bank's operating units. In addition, risk department is responsible for the independent review of risk management and the control environment.

Risk management strategy

The group operates in business lines, which generate risks that may differ in their frequency and severity. A greater ability to calibrate its risk appetite and risk parameters, the development of risk management core competencies, as well as the implementation of a high-performance and efficient risk management structure are therefore critical undertakings for the group.

The primary objectives of the bank's risk management framework are as follows:

- 1- To contribute to the development of the bank's various business lines to reach an ideal level of general risk level.
- 2- To guarantee the bank's sustainability as a going concern, through the implementation of a high-quality risk management infrastructure.

Risk management governance and risk principles

- 1- The Board of Directors provides general guidance for risk management and internal control.
- 2- Ensure that the risk management sector staff with a high degree of efficiency.
- 3- The risk management sector manages operation, market and credit risks in coordination with the rest of the bank's various departments.
- 4- The risk management sector manages its duties with full independence under the supervision of the Board of Directors.
- 5- The internal audit department sends reports to the audit Committee from the Board of Director and include the performance reports of operation units and the commitment of these units with the different risk policies.
- 6- The overall strategy for the bank's business units is developed in coordination with the Risk Management sector.
- 7- Contribute to an independent evaluation by analyzing transactions that involve credit risk and by providing advice with respect to the transaction proposed by business segments.
- 8- Develop a framework to identify and manage operational risks and promote an environment of internal control of the bank.
- 9- The compliance and governance follow strategy and development sector, and that would help to:
 - Develop and update the bank's corporate governance rules in order to achieve transparency and disclosure and determine the responsibilities and powers and the rules of accountability.
 - Evaluating the implementation of the bank to the rules of corporate governance.
 - Ensure that the level of qualification of all employees of the bank is raised and senior management is trained on practical practices of governance.
 - Ensure that the organizational structure of the bank guarantees or is achieving transparency.
- 10- Committee of assets and liabilities, which specializes in:

- Periodic follow-up to the policy of asset and liability management.
- Study of the risks of fluctuations in interest rates through the implemented policy in this regard.
- Approve the necessary adjustments to its pricing policy.
- Achieving a balance in the sources of funds.
- Study of the risks of fluctuations in foreign currency exchange rates and make required balance.
- Study liquidity indicators and propose the necessary measures.
- The verification of the adequacy of emergency plans that set to face liquidity risk.

11- The risk committee is emanated from board of directors and consists of three non-executive members from the board of directors, and the general manager of risk sector is attending its meetings. Its purpose is to help the board in fulfilling its responsibilities regarding supervision and monitoring (Risk Management Framework) in Banque Misr involving policies, procedures, and methods in managing credit, investment, operating, market, liquidity risk and all types of risks.

(A) Credit risk

- Corporate and financial institution credit risk.
- Retail, small and medium enterprise, and microenterprise credit risk.

The Bank takes on exposure to credit risk, which is the risk that counterparty will cause a financial loss for the bank by failing to discharge an obligation. Management therefore carefully manages its exposure credit risk. Credit exposures arise principally in loans and advances, debt securities and other bills. There is also credit risk in off-balance sheet financial arrangements such as contingent liabilities. The credit risk management and control are centralized in a credit risk management team in risk department which reports to the Board of Directors and senior management.

(A-1) Credit risk measurement

Loans and facilities to banks and customers:

Loans to clients, banks and financial investments are in the form of bonds, as well as current account balances, deposits with banks, rights and pledges from third parties from financial assets that are at risk of credit and that is represented by the inability of these parties to pay part or all of their due on the due date. The bank minimizes the impact of this risk by:

- Prepare credit studies for clients and banks before dealing with them to estimate and determine the related credit risk rates.
- Obtaining adequate guarantees to reduce the risks that may arise in the event of the default by the client or the banks.
- Following up and making a periodic study of clients and banks in order to evaluate their financial and credit positions and estimate provision required for non-performing loans.

The bank assesses the probability of delay at the level of each customer using detailed internal rating methods for different categories of clients. These methods have been developed for evaluation internally and consider statistical analysis with the personal judgment of credit officials to reach an appropriate rating of credit. The bank's customers are divided into four categories.

The position exposed to failure depends on the amounts that the bank expects to be in place when the delay occurs. For example, for a loan, this position is the face value. As for the commitments, the bank lists all the amounts actually withdrawn, in addition to the other amounts that are expected to have been withdrawn until the date of the delay, if it occurs.

The default or severe loss represents the bank's expectation of the extent of the loss when claiming the debt if the delay occurs. This is expressed in terms of debt loss, and certainly this varies according to the type of debtor, the priority of the claim, the availability of collateral or other credit coverage.

The administrative reports of monitoring and follow-up are issued monthly, quarterly, semi-annually and annually, and these reports are comprehensive and wide-ranging and deal with multiple topics including the following:

- Portfolio quality, industry concentrations and major risks.
- Product concentration, credit control and concentration of shares held with the bank as collateral.
- Monitor defaults, details of customer provision and movement of the provision.

Amounts resulting from expected credit loss - a significant increase in credit risk

When determining whether the risk of default on financial instruments has increased substantially since its initial recognition, the bank takes into consideration reasonable and supportive information that is available without unwarranted cost or effort. This includes quantitative and qualitative information, analyzes based on the bank's past experience and an expert credit assessment, including future information.

Credit risk rating

The group allocates a credit score for each risk based on the various data used to forecast default risks and apply judgments and estimates based on experience. Credit risk rating scores are determined using quantitative and qualitative factors that indicate default risk. These factors vary according to the nature of the risk and the nature of the borrower.

The credit risk rating score for each company is determined upon initial recognition based on the information available on the borrower. Exposures are subject to continuous monitoring. This may result in the exposure being transferred to a different degree of credit risk. Exposure monitoring requires the use of the following data:

Corporate exposure	Individual exposures
Information is obtained during the periodic review of files - such as audited financial statements, estimated budgets and projections. Examples of areas that require a specific focus are: gross profit margin, leverage rates, debt service coverage and commitment to pledges, quality management, and changes in senior management.	Internally obtained information and customer behavior - such as the use of credit card facilities.
Data from reference credit agencies, newspaper articles or changes in external ratings.	Solvency measures
Listed bonds, and credit default swap rates for the borrower, when available.	External data from reference credit agencies, including default information.
The actual and expected significant change in the borrower's political, regulatory and technical environment or his commercial activities.	

• Establish a schedule of default conditions

Credit risk rating scores are a key approach to determining default terms. The bank collects performance and default information related to its credit risk and analyzes it according to the product, the borrower and the degree of credit risk classification.

The bank uses statistical models to analyze the data obtained and make estimates of the probability of default over the remaining life of the financial instrument and how it is expected to change because of the passage of time.

The analysis includes identifying and calibrating the relationship between changes in default ratios and macroeconomic factors. For most exposures, the main macroeconomic factors include the price of oil, the rate of growth, GDP growth, government spending, the stock price index and unemployment.

Based on the economic data, and after taking into consideration a variety of external actual information and expectations, the bank prepares its perception of the "base case" of the future direction of the economic changes in question and a set of other potential forecast scenarios, and the bank uses these forecasts to modify the expectations of default risks.

• Determine whether the credit risk has increased significantly

The controls for determining vary whether credit risk has increased significantly by the portfolio and include quantitative changes in probabilities of default and qualitative factors, including the probability of default for the portfolio.

By using estimates made by its experts and based on previous experience, the bank can decide that credit risk has increased significantly based on specific qualitative indicators that indicate this, and that its impact will not fully be demonstrated in the quantitative analysis on regular basis.

• Definition of default

The following criteria are used to determine if a borrower is defaulting:

- If the borrower has an obligation that is 90 days (or more) past due.
- Borrower has an obligation and the bank has suspended the interest accrued.
- Borrower has a commitment (s) that has been restructured with a loss for the bank.
- Borrower has an obligation classified as non-performing by the bank.
- Borrower has an obligation to write it off wholly or partially.

When evaluating whether the borrower is in default, the bank looks at indicators:

- Quality - like any breach of pledges.
- Quantity - such as in case of late payment, and non-payment of any other obligations to the same issuer to the bank.
- It is based on data prepared internally and obtained from external sources.

The approach to the evaluation of whether the financial instrument is non-performing and its importance varies over time to show changes in conditions.

• Recognition of future information

The bank shall recognize future information in its evaluation of whether the credit losses of any instrument have increased significantly, since the bank's initial recognition and measurement of the expected credit losses. Based on various actual information and expectations, a scenario of the "basic state" of the future direction of the economic variables involved and a range of other potential expectations. This requires preparing two or more additional scenarios and studying the possibilities related to each outcome. External information includes economic data and forecasts published by rating agencies, such as Moody's Economic Data Services.

The "base case" represent the most probably outcome, and is consistent with the information used by the bank for other purposes such as strategic planning and budgeting. Other scenarios represent more optimistic and pessimistic results. On a regular basis, the bank performs potential tests for the most severe shocks, in order to set criteria for determining the best other scenarios.

The bank identifies and documents the main drivers of credit risk and credit loss for each portfolio. Using historical data analysis, he estimates the relationship between macroeconomic factors, credit risk and credit losses. These economic scenarios on include a set of the following basic indicators:

- GDP growth
- Unemployment rates
- Government spending
- Stock price indicator

The expected relationship between the main indicators, default and loss rates in the various portfolios of financial assets has been developed based on historical data analysis.

• Measuring expected credit losses

The main inputs to measure ECL are the structure of the conditions for the following variables:

- Probability of default. (PD)
- loss given default. (LGD)
- Exposure at default. (EAD)

The above indicators are generally extracted from internally prepared statistical models and other historical data, and they are modified to reflect future information, as indicated above.

Estimates of probability of default are estimates of a specific date that are calculated according to statistical classification models and are evaluated using classification tools related to the various categories of third parties and exposures. These statistical models are determined according to data collected. Market data can also be used internally and externally, including quantitative and qualitative factors, and when available to obtain the probability of loss given default for large companies. In case of the counterparty or exposures move between classes of ratings, this could lead to a change in the estimate of the probability of the loss given default.

The default loss ratio represents the amount of potential loss in case of loss given default. The bank estimates indicators of the history of claims redemption rates from defaulted parties. The loss given default ratio models consider the structure of the loss given default ratio, considering the structure, collateral, and collateral redemption costs that are an integral part of the financial asset. For secured retail loans, the value / type of the asset is a key indicator for determining the percentage of loss when defaulting. Estimates of the percentage of loss when defaulting is based on different economic

scenarios, and are calculated on the basis of discounted cash flows using the effective interest rate as a discount factor.

Exposure at default is the expected exposure in case of default. The bank extracts "exposure when defaulted" from the current exposures to the counterparty and possible changes in the current amount allowed under the contract, including amortization. Exposure to failure to represent a financial asset represents its total book value. For loan obligations and financial guarantees, the "exposure on default" includes the amount withdrawn and the possible future amounts that can be drawn down under the contract and that are estimated based on historical data and future expectations. For some financial assets, exposure is determined by default, by assessing a set of results of potential exposures at different times using statistical scenarios and methods.

- **Debt instruments**

For debt instruments, external rating such as Standard and Poor's rating or equivalent are used for managing of the credit risk exposures, and if this rating is not available, then other ways similar to those used with the credit customers are used. These investments in those securities and bills are viewed as a way to gain a better credit quality and maintain a readily available source to meet the funding requirement at the same time.

(A-2) Risk limit control and mitigation policies

The bank manages limits and controls concentrations of credit risk wherever they are identified – in particular to individual counterparties, debtors, industries and countries. The bank structures the level of credit risk it undertakes by placing limits on the amount of risk accepted in relation to one borrower, or group of borrowers, and to geographical and industry segments. Such risks are monitored on a revolving basis and subject to an annual or more frequent review, when considered necessary. Limits on the level of credit risk by individual, counterparties, product, and industry sector and by country are approved quarterly by the Board of Directors.

The exposure to any one borrower including banks is further restricted by sub-limits covering on- and off- balance sheet exposures.

Some other specific control and mitigation measures are outlined below:

- **Collateral:**

The main source of payment is the cash flow of any customer, but sometimes, according to the credit study, additional collateral is taken to reduce the risks in case of a customer default, and also works to enhance the credit situation in case of fail to pay the full debt, and the types of collaterals that are accepted by the bank:

- Securities (stocks and bonds)
- Mortgage
- Commercial mortgage on machines and equipment
- Personal guarantees or what is known as bail

- Freezing the customer's credit balances

- **Policies related to credit risk of companies and financial institutions:**

Several policies were adopted for credit risk of corporate and financial institutions to comply with the risk reduction procedures, and these policies are:

- Credit Grant Powers Policy.
- Creditworthy Policy.
- Credit Control and Follow-up Policy and General Administration Work Control and Follow-up Credit Procedures.
- Risk management policies and procedures for defaulted and watch list credit clients.
- Credit policy for dealing with financial banking institutions.

Credit Portfolio Management Policy:

The risk appetite to grant facilities according to industry, creditworthiness, currency, and terms of facilities, which leads to a clear definition of all the characteristics that the bank aims to achieve in relation to the loan portfolio including levels of diversification and concentration by setting limits for total employment with one customer and/or a single group, a specific industry, and an acceptable limit of employment according to geographical distribution (which takes into / consideration country risks) as well as according to the type of product.

- Individual credit risk policies
- Standardized Credit Policy for Retail Products

(A-3) Impairment and (provisions) policies

The internal systems of the evaluation as mentioned before (Note A/1) focus heavily on credit quality planning from the beginning of proving lending and investment activities. Otherwise, only the impairment losses that occurred on the balance sheet date are recognized for financial reporting purposes.

Based on objective evidence indicating the impairment as stated in this explanation and due to the difference in the methods applied, the credit losses charged to the financial statements are usually less than the estimated loss amount using the expected loss model used.

The following table shows the percentage of items on financial statements related to loans and facilities for banks and customers for each stage:

Bank evaluation	<u>December 31, 2023</u>	<u>December 31, 2022</u>
	Expected Credit Loss provision %	Expected Credit Loss provision %
Stage one	27.07 %	14.44%
Stage two	25.53 %	25.59 %
Stage three	47.40 %	59.97 %
Total	<u>100 %</u>	<u>100 %</u>

(A-4) Maximum exposure to credit risk before collateral held

	Amounts in EGP Millions	
	<u>December 31, 2023</u>	<u>December 31, 2022</u>
<u>In balance sheet items exposed to credit risk</u>		
Total loans and advances to banks (gross)	11,626	8,505
<u>Loans and advances to customers (gross):</u>		
<u>Individuals and small enterprises:</u>		
Overdraft	6,753	5,688
Credit cards	8,096	4,709
Personal loans	152,803	122,869

Discounted papers	1,903	1,527
Total loans and advances to customers	1,154,853	869,190
<u>Financial investments:</u>		
Debt instruments through comprehensive income	542,209	371,795
Debt instruments at amortized cost	350,273	408,883
Other assets	86,277	73,719
Total	<u>2,145,238</u>	<u>1,731,092</u>
<u>Off Balance sheet items that exposed to credit risk</u>		
Letters of guarantee	210,397	169,935
Letters of credit import	10,409	29,959
Letters of credit export	8,601	14,390
Acceptance	15,170	34,162
Loan Commitments	4,756	6,496
Other	613	563
Total	249,946	255,505

The above table represents the maximum bank exposure to credit risk at December 31, 2023 without taking into consideration any guarantees.

As shown above loans and advances to customers and banks represents 54.38% of the maximum limit exposed to credit risk in the balance sheet against 50.70% at the end of the previous year, while investments in debt instruments represents 41.60% of the maximum limit exposed to credit risk in the

balance sheet against 45.04% at the end of comparative year. the Group applied more prudent selection processes when granting loans and facilities during the financial year ending December 31, 2023

(A-5) Loans and advances

The following table shows the different stages of loans and advances for customers and banks as at December 31, 2023

Amounts in EGP Millions

Item	December 31, 2023			
	Stage 1	Stage 2	Stage 3	Total
Loans and advances to customers	1,051,511	61,724	41,618	1,154,853

(B) Market risk

The group is exposed to market risk represented in fluctuations in fair value or in future cash flows resulted from changes in market prices. The market risk is happening because of the open positions of interest rates, currency exchange rates, and the products of the shareholders' equity as each of them is exposed to the markets public and private movements as well as to the changes in the sensitivity level of market prices or rates such as interest rates, foreign exchange rates and the prices of equity instruments and liquidity risk.

The dealing room department and market risk department have the responsibility to evaluate and manage the risk of insufficient necessary fund and the related risks associated with imbalance distribution of balance sheet structure (due to changes in interest rate and exchange rate prices) as well as bank's long-term finance and the management of capital requirements and capital structure.

(C) Liquidity risk

Liquidity risk is the risk that the group is unable to meet its payment obligations associated with its financial liabilities when they fall due and to replace funds when they are withdrawn. The consequence may be the failure to meet obligations to repay depositors and fulfill commitments to lend.

(C-1) Liquidity risk management

The controls on liquidity risk applied by the group's money management and correspondents sector include the following:

- Managing daily financing by monitoring future cash flows to ensure that financial liability can be met, it includes many replacements when it is matured or Pawned to customers, maintaining an active presence in global money markets to enable this to happen.
- Maintaining a diverse range of funding sources with back-up facilities.
- Monitoring balance sheet liquidity and advances to core funding ratios against internal and CBE regulations.
- Managing the concentration and profile of debt maturities.

For monitoring and reporting takes the form of cash flow measurement and projections for the next day, week and month respectively, as these are key periods for liquidity management. The starting point for those projections is an analysis of the contractual maturity of the financial liabilities and the expected collection date of the financial assets.

Bank's money management and correspondents' department also control the unmatched medium-term assets management, with the level and type of the unutilized portion of loan commitments, also the extent of utilizing debit current accounts advances and the impact of contingent liabilities such as letters of guarantees and letter of credits.

(C-2) Funding approach

Sources of liquidity are regularly reviewed jointly by a specific team from Risk Management department to maintain a wide diversification of currency, provider, product and term.

(The liquidity Control ratios (NSFR – LCR))

1- Liquidity Coverage Ratio (LCR)

The liquidity coverage ratio aims at ensuring that the bank reserves an enough amount of liquid-high-quality assets which are not mortgaged to meet the net cash outflows during the upcoming 30 days amidst a scenario of unexcepted conditions with the condition of not dropping the liquidity coverage ratio below 100% at all times.

This ratio is calculated according to the following formula:

$$\text{LCR} = \frac{\text{liquid-high-quality assets}}{\text{Net Cash Outflows during 30 days}} \geq 100\%$$

The liquidity coverage ratio for the financial year ended in Dec, 2023 has recorded the following:

Local Currency	999.78%
Foreign Currency	271.92%
Total Currencies	679.92%

The control ratio $\geq 100\%$

2- Net Stable Funding Ratio (NSFR)

Represents the net percentage of stable financing between the available stable funding which represents the numerator of the equation and the required stable funding which represents the denominator.

Furthermore, the ratio works on facing the dissonance between the long-term financial structure through urging banks to exploit long-term stable sources of funds that lasts for more than a year at least and that is to cover the investments in assets and any financial claims which aids the bank in the formation of sources of funds which cannot be below 100% on a permanent basis.

This ratio was calculated according to the following formula:

$$\text{NSFR} = \frac{\text{The amount of available stable finance}}{\text{The amount of required stable finance}} \geq 100\%$$

The net stable funding ratio for the financial year ended in Dec, 2023 has recorded the following:

Local Currency	412.88%
Foreign Currency	491.13%
Total Currencies	427.56%

The control ratio $\geq 100\%$

Capital management

The bank's objectives when managing capital, which comprises other items than the items within the Equity, which appears on the face of the statement of the financial position, hereunder is objectives:

- Comply with capital legal requirements in Arab Republic of Egypt and other countries where the bank's branches operate.
- Protecting the Bank's ability to sustain and enabling it to generate proper yield for its shareholders and other parties that deal with the Bank.
- Maintain a strong capital base that support business growth.

Capital adequacy and capital demand are reviewed according to the requirements of regulators (Central Bank of Egypt in the Arab Republic of Egypt) periodically by the bank's management through models that depend on the guidelines of Basel Committee for banking supervision. Required information is prepared and submitted to the Central Bank of Egypt on a quarterly basis.

The Central Bank of Egypt requires each bank to do the following:

- Maintain the sum of EGP 5 bn as a minimum limit for issued and paid-up capital.
- a minimum level of capital adequacy ratio of 13.25%, calculated as the ratio between total value of capital base elements, and the risk-weighted assets and contingent liabilities of the bank (Credit Risk, Market Risk and Operational Risk).

Overseas branches are subject to the supervision rules regulating banking business in countries where they operate.

The numerator of the capital adequacy ratio consists of the following two tiers:

Tier One:

Tier 1 capital is the core capital, which comprises paid-up capital, retained earnings, reserves resulting from profits distribution except for the general banking risk reserve, deducting goodwill or any retained losses, in addition to Other Comprehensive Income (OCI) irrespective of being positive or negative.

The interim net profit is incorporated in Tier 1 Capital in accordance with the circular of the Central Bank of Egypt Board of Directors held on 15 February 2017.

Tier Two:

Tier 2 is the subordinated capital which comprises the equivalent amount of the loans provision against debt instrument / loans, advances and contingent liabilities at Stage 1 at maximum of 1.25% from the total Credit risk-weighted assets and contingent liabilities, Subordinated loans/deposits with more than five years to maturity (amortizing 20% of its carrying amount in each year of the remaining five years to maturity), in addition to 45% of the special reserve and 45% of the increase in fair value above the carrying amount of investments in subsidiaries and associates.

While calculating the numerator of the capital adequacy ratio, total value of Tier 2 should not exceed total value of Tier 1. Also, the value of subordinated loans/ deposits shouldn't exceed 50% of Tier 1.

Assets are risk weighted by Zero to 400% classified according to the nature of the debtor in each asset to reflect the credit risk associated with it, taking into consideration the cash collaterals. The same treatment is applied for the Off-balance sheet items after adjustments to reflect the contingency nature and the potential losses of those amounts.

Banque Misr has complied with all local & foreign capital requirements in the Countries in which its foreign branches operate in for the current period.

The below tables summarize the compositions of Tier 1, Tier 2, capital adequacy ratio and leverage ratio based on Consolidated Financial statement of the financial group as at end of 30th of June 2023 and comparative year based on Basel II requirements in accordance to the instructions of the Central Bank of Egypt which had been issued on 24th of December 2012, and CBE instructions regarding

the adoption of Standardized Approach for measuring Operational risk starting from year 2022 to replace Basic Indicator Approach.

1- Capital adequacy ratio:

Amounts in EGP Millions

	<u>December31, 2023</u>	<u>December31, 2022</u>
<u>Tier one after exclusions (Basic continuous capital):</u>		
Paid-in capital	50,000	15,000
Reserves	26,705	42,744
General risks reserve	1,016	1,015
Retained Earnings	36,723	8,950
Total balance of accumulated OCI	24,354	14,650
Total exclusions from basic continuous capital	(8,859)	(10,122)
Net basic continuous capital after exclusions	129,939	72,237
Additional basic capital	53,679	57,259
Net tier one after exclusions	183,618	129,496
<u>Tier two after exclusions (Supplementary capital):</u>		
Subordinated loans within the designated limits	58,364	53,940
Expected credit losses of debt instruments, loans, credit facilities, and contingent liabilities listed in stage one	16,633	7,236
Net tier two	74,997	61,176
Total capital base	258,615	190,672
<u>Risk weighted assets and contingent liabilities :</u>		
Credit risk	1,337,366	1,034,691
Market risk	45,192	34,438
Operation risk	65,210	80,645
Total	1,447,768	1,149,774
Capital adequacy ratio of tier one (%)	12.68%	11.26%
Capital adequacy ratio (%)	17.86%	16.58%

2- Leverage ratio

The Board of Directors of the Central Bank of Egypt (CBE) issued a decision in its meeting on 7 July 2015 to approving the regulatory instructions for leverage, with banks commitment to the minimum rate set for (3%) on a quarterly basis as a commitment regulatory rate as of 2018 in order to maintain the strength and integrity of the banking system and keep up with the best international supervisory practices in this regard.

Leverage reflects the relationship between tier one of capital after elimination, and the Bank's assets (both on- and off-balance-sheet) are unweighted with risk weights.

For the purpose of preparing the statement of cash flow, the cash and cash equivalent include the following balances of maturity dates within less than three months from the date of acquisition :

Amounts in EGP Millions

	December 31, 2023	December 31, 2022
Cash and balances with central banks	35,508	21,092
Due from banks	564,552	601,637
Treasury bills (net)	189,781	186,133
	789,841	808,862

(39) Subsequent events :

- On February 1, 2024, the Monetary Policy Committee of the Central Bank of Egypt decided during its meeting to raise the interest rates for overnight deposit and lending by 200 basis points to reach 21.25%, 22.25%, and 21.75%, respectively. Additionally, the credit and discount rates were raised by 200 basis points to reach 21.75%.

- On March 6, 2024, during an extraordinary meeting, the Monetary Policy Committee decided to raise the interest rates for overnight deposit and lending by 600 basis points to reach 27.25%, 28.25%, and 27.75%, respectively. Furthermore, the credit and discount rates were increased by 600 basis points to reach 27.75%.

- In March 2024, the Egyptian banking market witnessed fluctuations in foreign exchange rates against the Egyptian pound. The exchange rate for the US dollar rose to 47 Egyptian pounds compared to 30.89 Egyptian pounds on December 31, 2023.

- The impact of foreign exchange rate fluctuations can be significant on the monetary value of assets and liabilities denominated in foreign currencies, as well as on the income statement through the evaluation of currency positions. It is essential for management to regularly assess the current situation and its effects to ensure effective risk management.
